

## Guido Bosch

Is a researcher in the Animal Nutrition Group of Wageningen University, the Netherlands. He obtained his PhD degree for his work on the influence of nutrition on behaviour in dogs. Currently, his main area of expertise is food evaluation research in pet, zoo and production animals.

His research is mainly focused on understanding the food properties that drive appetite and food intake behaviour and on the evaluation of nutritional and (dys)functional characteristics of (novel) foods and ingredients.

Furthermore, he has a strong interest in the evolutionary history and feeding ecology of animals, which may help to further understand the origin of their digestive physiological and metabolic idiosyncrasies and to improve their foods for health and longevity.
